

Thank you for your interest in The Equipment Lock Company (TELC) products. Until now, heavy equipment owners did not have a simple solution to securing their equipment. With the ever-growing theft rate of heavy equipment, TELC products are a must for every contractor. Each device has its own unique barrel type key (2), or multiple units can be ordered keyed alike for larger contractors with more equipment. We keep your key code on file for future orders. Some of TELC's products are available in a four-digit changeable combination lock; no keys are needed. Set your own code and change it as you wish. TELC's primary products secure the drive controls, making the machine inoperable even if the ignition key is available. Our locks are immediate visual and mechanical theft prevention devices. They also keep other trades from "borrowing" your equipment, and prevent children from playing or vandalizing. They may also be used in conjunction with OSHA lockout/tagout procedures to prevent the operation of unsafe equipment while it is being serviced. **Please contact your insurance company for you may be eligible for an immediate or incentive discount when using TELC products.** **** NEW PRODUCTS ARE IN BLUE AND SUBJECT TO AVAILABILITY ****

SPECIAL ORDER : Keyed alike units: \$7 ea. extra & the key code **IS** kept on file. Random key codes **ARE NOT** kept on file. Extra keys: \$5ea.

Skidsteer Lock and E-Series Skidsteer Lock: Lock the drive controls of all skid loaders. Some models of **Gehl®**, **Mustang®**, **ASV®/Terex®** and **all of Belle® skid loaders** may not have holes in the protective cage below the drive controls. Additionally, **Caterpillar®** skid loaders with enclosed cabs (ONLY) may have stationary glass or a square steel plate for directions at drive control level. **John Deere®** skidloaders with enclosed cabs (ONLY) may have a door that tilts inward. These circumstances may prohibit the Skidsteer Lock or E-Series Skidsteer Lock from being installed in the normal fashion. **JCB Robot®**, **Takeuchi®** and **Thomas®** skid loaders cannot use the Skidsteer Lock, **only** the E-Series Skidsteer Lock may be used. Please contact TELC for alternative installation instructions prior to ordering for any of the above-mentioned machines. Both products **DO** work on "joystick" type controls and typical **enclosed cabs**.

Attachment Lock : Lock both locking arms in the down position. Please specify "short" if used on **John Deere®** or **New Holland®** brand machine. All other manufacturers require the standard "long" version Attachment Lock.

Backhoe Lock: Locks the forward/reverse drive control and/or the steering wheel in the turned position. May be used on most equipment with a steering wheel.

Stabilizer Lock: Locks the stabilizer in the down position with a wheel off of the ground. Please specify length needed: **New Holland®** backhoe (ONLY) 21". All other full-size backhoes use 18". **Mini-backhoes, articulating equipment** steering cylinders, and **dozer** blades use 15" or 12". **Mini-excavator** and **trencher** back-fill blades use 6 ½". Rough terrain **scissor-lift, man-lift and forklift** steering cylinder lengths will vary. Check your equipments cylinder length.

Excavator Lock: Locks both drive controls in the opposite direction. Newer model (2000+) **Kubota®** and **JCB®** mini excavators may have drive controls too thick for the Excavator Lock to be installed. A 6 ½" Stabilizer Lock may be used on the backfill-blade hydraulic cylinder instead.

Job Site Office Door Lock: Secures office trailer and warehouse doors from 32" to 40". All mounting hardware is included.

Ball & Ring Hitch Lock: Fits any size ball (1 7/8", 2", 2 5/16") or ring/pintle-type hitch. Ask an associate about Goose-neck and fifth-wheel hitches.

Heavy Duty Wheel Lock: Fits any size wheel from an ATV or trailer to a large truck tire or dually up to 20 ½" wide. Lug protector plate included!

Hide a Hitch Lock: Store and lock any size ball, tri-ball, or universal ring-type coupler out of the way. For use on all 2" receiver hitches. No extra pin needed!

Wheel to Pedal Lock: Secure the steering wheel in the turned position while attached to the brake pedal.

Cushion Tire Lift Lock: Lock the steer tire in the turned position on electric scissor lifts, man lifts, and all warehouse type forklifts using the solid rubber tire.

Cargo Door Locks: Heavy Duty and Standard sizes. Both sizes secure the double doors of all sea containers and semi-trailers. Adjusts to fit the vertical bars from 9 ¾" to 16" apart. An extension is available for the Heavy Duty Cargo Door Lock for odd size container bars 17-21" apart (\$25). The Heavy Duty Cargo Door Lock is recommended for stationary storage containers and trailers.

Rolling Door Lock: Secure the locking handle in the down position. No mounting required. The door holds the bracket in position.

Landing Gear Lock: Secure the hand crank so the landing gear cannot be raised.

Cargo Door Lever Lock: Secure a single cargo door lever in place. For both vertical and horizontal locking bars.

Locking Fuel Cap: Lock the fuel tank (having external threads) on large diesel trucks and some equipment. May be keyed to all TELC products.

Anti Siphon screen: Prevent fuel theft by permanently installing the anti-siphon screen into the neck of the fuel tank on large diesel trucks and some equipment.

TELC products will be a valuable asset to your company's safety, liability, and security procedures. We accept Government purchase cards and purchase orders.
