

Thank you for your interest in The Equipment Lock Company (TELC) products. Until now, heavy equipment owners did not have a simple solution to securing their equipment. With the ever-growing theft rate of heavy equipment, TELC products are a must for every contractor. Each device has its own unique barrel type key (2), or multiple units can be ordered keyed alike for larger contractors with more equipment. We keep your key code on file for future orders. Some of TELC's products are available in a four-digit changeable combination lock; no keys are needed. Set your own code and change it as you wish. TELC's primary products secure the drive controls, making the machine inoperable even if the ignition key is available. Our locks are immediate visual and mechanical theft prevention devices. They also keep other trades from "borrowing" your equipment, and prevent children from playing or vandalizing. They may also be used in conjunction with OSHA lockout/tagout procedures to prevent the operation of unsafe equipment while it is being serviced. **Please contact your insurance company for you may be eligible for an immediate or incentive discount when using TELC products.**

Pricing per unit as follows (USD):

Skidsteer Lock	(keyed) \$199.50	E-Series Lock	(keyed) \$129.50	Attachment Lock	\$99.50
	(combo) \$219.50		(combo) \$149.50

SPECIAL ORDER: Keyed alike units are \$7 each extra and the key code IS kept on file. Random key codes ARE NOT kept on file. Extra keys are \$5 each.

Skidsteer Lock and E-Series Skidsteer Lock: Lock the drive controls of all skid loaders. Some models of **Gehl®**, **Mustang®**, **ASV®** and all of **Belle® skid loaders** may not have holes in the protective cage below the drive controls. Additionally, **Caterpillar®** skid loaders with enclosed cabs (ONLY) may have stationary glass or a square plate for directions at drive control level. These circumstances may prohibit the Skidsteer Lock or E-Series Skidsteer Lock from being installed in the normal fashion. **JCB Robot®, Takeuchi® and Thomas®** skid loaders cannot use the Skidsteer Lock, **only** the E-Series Skidsteer Lock may be used. Please contact TELC for alternative installation instructions prior to ordering for any of the above-mentioned machines. Both products **DO** work on "joystick" type controls and typical **enclosed cabs**.

Attachment Lock : Lock both locking arms in the down position. Please specify "short" if used on **John Deere®** or **New Holland®** brand machine. All other manufacturers require the standard "long" version Attachment Lock.

Backhoe Lock: Locks the forward/reverse drive control and/or the steering wheel in the turned position. Backhoe Locks are not just for backhoes, they will secure most equipment with a steering wheel.

Stabilizer Lock: Locks the stabilizer in the down position with a wheel off of the ground. Please specify length needed: **New Holland®** backhoe (ONLY) 21". All other full-size backhoes use 18". **Mini-backhoes**, **articulating equipment** steering cylinders, and **dozer** blades use 15" or 12". **Mini-excavator** and **trencher** back-fill blades use 6 ½". Rough terrain **scissor-lift** and **man-lift** steering cylinder lengths will vary. Check your equipments cylinder length.

Excavator Lock: Locks both drive controls in the opposite direction. Newer model (2000+) **Kubota®** and **JCB®** mini excavators may have drive controls too thick for the Excavator Lock to be installed. A 6 ½" Stabilizer Lock may be used on the backfill-blade hydraulic cylinder instead.

Ball & Ring Hitch Lock: Fits any size ball (1 7/8", 2", 2 5/16") or ring/pintle-type hitch. Goose-neck and fifth-wheel hitches may use the H.D. Wheel Lock.

Heavy Duty Wheel Lock: Fits any size wheel from an ATV or trailer to a large truck tire or dually up to 20 ½" wide. Lug protector plate included!

Job Site Office Door Lock: Secures office trailer and warehouse doors from 32" to 40". All mounting hardware is included.

Cargo Door Locks: Heavy Duty and Standard sizes. Both sizes secure the double doors of all sea containers and semi-trailers. Adjusts to fit the vertical bars from 9 ¾" to 16" apart. An attachment is available for the Heavy Duty Cargo Door Lock for odd size container bars 17-21" apart. The Heavy Duty Cargo Door Lock is recommended for stationary storage containers and trailers.

Hide a Hitch Lock: Store and lock any size ball, tri-ball, or universal ring-type coupler out of the way. For use on all 2" receiver hitches. No extra pin needed!

We are confident you will find TELC products will be a valuable asset to your company's inventory as well as your safety, liability, and security procedures. We accept all Government purchase cards and purchase orders.
