

## TELC Offers New Anti-theft Devices

**FOR IMMEDIATE RELEASE**

The Equipment Lock Company (TELC) - a company that manufactures and sells anti-theft devices for heavy equipment, trucks, and trailers, introduces three new products: the **Landing Gear Leg Lock**, **Rolling Door Lock**, and the **Wheel to Pedal Lock**.

The **Landing Gear Leg Lock** secures the landing gear hand crank in place preventing the landing gear from being raised.

The **Rolling Door Lock** secures the roll-up door lever in the locked position. You can install the lock without mounting or drilling. The door holds the bracket down, preventing a thief from accessing the cargo.

The **Wheel to Pedal Lock** secures the steering wheel in the turned position while attached to the brake pedal; therefore, preventing theft or unauthorized borrowing.

As with all of TELC's products, these three new locks can have multiple units keyed alike or can be keyed alike to any other TELC product. And, all three are offered with a built-in four digit changeable combination lock.

For over seven years, TELC has been manufacturing and developing locking devices for skid loaders, backhoes, excavators, sea containers, office trailers, and more. TELC products are a wise investment for equipment security. They are powder coated and/or electroplated for a durable finish and use barrel style keys that can be special ordered keyed alike. Some products are offered in a changeable combination lock.

Visit TELC at WOC 2010 in booth N1767. Show Special: 20% off all orders placed on the show floor!
